

## Geometry of Manifolds II : Exercise Sheet 11

---

Jonas Ziefler

9. Juli 2019

---

Diese Aufgaben sind schriftlich auszuarbeiten und am 18. Juli vor der Vorlesung abzugeben. Für jede Aufgabe gibt es 4 Punkte.

Zweierabgaben sind erlaubt. Bitte bei der ersten Abgabe Matrikelnummer(n) angeben.

**Aufgabe 1.** Show that, with respect to coordinates obtained using stereographic projection, the metric on  $H^n(R)$  takes the form

$$g = \frac{4}{(1 + K\|X\|^2)^2} (dx_1^2 + \dots + dx_n^2)$$

with  $K = -\frac{1}{R^2}$ .

**Aufgabe 2.** Show that all isometries (i.e., diffeomorphisms compatible with the respective metrics) of the model spaces are of the form given in the lecture.

**Aufgabe 3.** Show that geodesics in the Poincare ball model / half space model are precisely the constant speed parametrizations of circular arcs and lines segments that intersect the boundary orthogonally.

**Aufgabe 4.** Let  $\gamma: [a, b] \rightarrow M$  be a piecewise smooth curve in a Riemannian manifold that connects two points  $p$  and  $q$  and realizes their distance, i.e.

$$L(\gamma) = d(p, q).$$

Show that

- a) all restrictions of  $\gamma$  to subintervals  $[c, d] \subset [a, b]$  realize distance and
- b)  $\gamma$  is smooth.
