

	NEWTONIAN MECHANICS	1
	Experimental facts	3
1	1. The principles of relativity and deteminancy	3
	2. The galilean group and Newton's equations	4
	3. Examples of mechanical systems	11
	Investigation of the equations of motion	15
	4. Systems with one degree of freedom	15
	5. Systems with two degrees of freedom	22
2	6. Conservative force fields	28
	7. Angular momentum	30
3	8. Investigation of motion in a central field	33
	9. The motion of a point in three-space	42
4	10. Motion of a system of n points	44
	11. The method of similarity	50
	LAGRANGIAN MECHANICS	53
	Variational principles	55
5	12. Calculus of variations	55
	13. Lagrange's equations	59
6	14. Legendre transformations	61
	15. Hamilton's equations	65
7	16. Liouville's theorem	68
	Lagrangian mechanics on manifolds	75
8	17. Holonomic constraints	75
	18. Differential manifolds	77
	19. Lagrangian dynamical systems	83
9	20. E. Noether's theorem	88
	21. D'Alembert's principle	91
	Oscillations	98
10	22. Linearization	98
	23. Small oscillations	103
	24. Behaviour of characteristic frequencies	110
	25. Parametric resonance	113
