über das Thema

Evolution by Curvature

We will discuss recent advances on singularity formation in geometric flows. In particular, we plan to consider fully nonlinear flows where the speed is a nonlinear function of the curvature eigenvalues. An interesting class of examples are flows for convex hypersurfaces with speed given by a power of the Gaussian curvature. The asymptotic behavior of these flows is by now well understood, and depends in a subtle way on the exponent. The main tools are a classification of self-similar solutions, as well as a monotonicity formula for an entropy functional.

Termine

- | | | | |
|-------------|--------------------|-----------------|-----|
| Freitag, | 16. Dezember 2016, | 10 c.t.-12 Uhr, | N16 |
| Mittwoch, | 21. Dezember 2016, | 14 c.t.-16 Uhr, | N16 |
| Donnerstag, | 12. Januar 2017, | 14 c.t.-16 Uhr, | N16 |

Hierzu wird herzlich eingeladen!
