

1	Silas Höll	Definitions and examples: Lie algebras, ideals, representations	1-10 [H]
2	Tammo Braun	Solvable, nilpotent and semisimple Lie algebras	10-20 [H]
3	Jakob Feldner	Killing form, Casimir element and Jordan decomposition	21-31 [H]
4	Konstantin Singer	weights, maximal vectors and root space decomposition	31-40 [H]
5	Julian Theissler	Root systems	Kap. 11 [EW]
6	Simon Belka	Klassische Lie-Algebren	Kap. 12 [EW]
7	Leonie Kempf	Klassifikation der Wurzelsysteme	Kap. 13 [EW]
8	Max Schultz	Einfache Lie-Algebren	Kap. 14 [EW]
9	Maren Biener	Universell Einhüllende	89 - 95 [H], 1.5, 2.4.1 aus [D]
10	Julia Geißert	Matrizengruppen	15-33 [B]
11	Luca Sauter	Exponentialabbildung	45-59 [B]
12	Niklas Strobel	Matrix-Lie-Algebren	71-85 [B]
13	Anahita Wick	Höchstgewichtstheorie	107-116 [H], 54-61 [D]
14	Cynthia Hoffmann	Harish-Chandra Charakter-Formel	126-134 [H]
15	Jannis Hettenbach	Harish-Chandra Isomorphismus	77-80 [W]
